

Script for deploying artifacts

```
#!/bin/bash
```

```
input="/home/ahladh/ip"  
echo "enter front-end build number"
```

```
read fnum  
front_artifact=E2E_Build_${fnum}.zip  
#read build number  
echo "enter back-end build number"
```

```
read bnum  
#read build number  
back_artifact=angular${bnum}.zip
```

```
front_folder=${front_artifact//.zip}  
back_folder=${back_artifact//.zip}
```

```
mkdir /home/ahladh/$front_folder  
#make a folder for holding front end artifacts  
mkdir /home/ahladh/$back_folder  
#make a folder for holding back end artifacts
```

```
wget --user=admin --password=admin123  
"http://35.190.147.53:8081/nexus/content/repositories/pearup/$front_artifact" -P  
/home/ahladh/$front_folder  
wget --user=admin --password=admin123  
"http://35.190.147.53:8081/nexus/content/repositories/pearup/$back_artifact" -P  
/home/ahladh/$back_folder
```

```
cd /home/ahladh/$front_folder
```

```
unzip /home/ahladh/$front_folder/$front_artifact  
#unzipping the front end artifacts  
rm $front_artifact
```

```
cd /home/ahladh/$back_folder
```

```
unzip /home/ahladh/$back_folder/$back_artifact
```

```
#unzipping the backend artifacts
rm $back_artifact
```

```
while read line
do
ssh ahladh@$line < /home/ahladh/remote_test.sh
```

```
scp -r /home/ahladh/$front_folder $line:/home/ahladh/pearup_E2E/artifacts/
scp -r /home/ahladh/$back_folder $line:/home/ahladh/pearup/artifacts
#copy the contents in repective directories
done < $input
```

Script for removing the contents

```
#!/bin/bash
```

```
if [ -d /home/ahladh/pearup/artifacts/* ]
then
    rm -r /home/ahladh/pearup/artifacts/*
fi
```

```
if [ -d /home/ahladh/pearup_E2E/artifacts/* ]
then
    rm -r /home/ahladh/pearup_E2E/artifacts/*
fi
```
